## Comments:

Clock 859 is a synthetic clock oil. Its stability against ageing is superb, even under most adverse conditions. It is compatible with steel, brass and plastic materials. Special stabilizers protect the oil from negative influences of pinion or free cutting steel. Friction values in steel/steel and brass/steel bearings are outstandingly low. Wear is reduced to a minimum.

## Tribological Data:

Test System: sphere on prism (ISO 7148/2)

P094c

## Application:

For clock movements, counters, printers, alarm clocks, helical gear trains, measuring devices, precision gears, plotters, brass/steel bearings from 0.1 to 10 mm diameter ( 0.004 to $3 / 8$ inches).
